BURRIS LOGISTICS ®

Burris Supply Chain Portal
Case Study

Integration
We integrate with our partners fully and provide them with the most time-efficient and accurate updates about their products.

Transparency
Our expertise and transparency help us provide our partners with an easier workflow to manage their entire supply chain from one platform to avoid any headaches.

Solutions
We offer many solutions, such as Demand Planning Feature, Data Integration, Yard Management, Load Builder, Virtual Warehousing, Real-Time Alerts, Forecast Exceptions, Carrier Loads, and more, to make the workflow of our valued partners easy.

About the Burris Supply Chain Portal (BSCP)
Our BSCP enables us to integrate with our partners fully, so they receive the most time-efficient and accurate updates of their product's integrity, storage, and transportation. The transparency we are able to provide our partners is one aspect of the WOW Service our Team can showcase.

The Challenge
The supply chain industry is a complicated, unpredictable, and sensitive industry that requires an end-to-end supply chain partner that can manage every aspect of their partner's products with expertise and transparency. We have seen challenges such as strawberries going bad and not being accepted for purchase because of outdated logistics technology. At Burris Logistics, we are proud to offer an easier workflow to our partners and one that allows them to manage their entire supply chain from one portal to avoid these headaches.

The Solution
Some of the top features we use on our BSCP include the Demand Planning Feature, Data Integration, Yard Management, Load Builder, Virtual Warehousing, Real-Time Alerts, Role-Based Security, Forecast Exceptions, Carrier Loads, Item Pricing, and Distribution Center (DC) Appointment Management Features. These features allow us to streamline the process of getting our partner's top-quality products from food producers to food distribution centers. A lot of our partners express the need for planning information, purchasing assistance, and more.

The Result
The Burris Logistics Technology Team has created a portal that integrates multiple aspects of your supply chain workflow into one easy to use platform. Purchase Order management, Produce Inspection Tools, and Dock Scheduling are just some of the features that enhance your supply chain management experience. Customers have decreased their dependence on multiple, non-integrated technology solutions by relying on the BSCP. The Produce Inspection Tool replaces stacks of paper and enbales partners to share image and grading data back to a supplier to reduce cost and rejected shipments.

LEARN MORE:

"The value of our BSCP to our supply chain partners is to have all parties in the chain with the same information, at the same time, so that they can work together more efficiently to deliver the right products, to the right people, at the right time," Jeffery Inns, Product Manager.
